2. Signs and Markers

Mine identification signs are in place at the points of public access into the permit area. The signs contain the required information.

4.a Hydrologic Balance: Diversions

Top of culvert that leads into sediment pond #1B is smashed. The operator plans on replacing this culvert when installing other needed culverts at the mine site. The operator has submitted a Drainage Control Amendment to the Division which was just returned with deficiencies. Once this amendment is approved the smashed culvert will be replaced. The culvert is still functional as efforts have been made to lift the smashed portion.

4.b Hydrologic Balance: Sediment Ponds and Impoundments

The open channel spill way from sediment pond #3 has been re-worked into a concave design with the rip rap. Larger rip rap has been placed to the outside and gradations of smaller rip rap toward the center. Water is still present inside of pond #3, but has diminished substantially since the previous inspection.

5. Explosives

Information is being gathered for pre-blast survey of structures around the mine site to keep on file in case blasting is ever needed.
